

THE HOTCHKISS GROUP OF ENGINEERING COMPANIES

PARALYMPIC TEAM BIKE HANDLE-BAR

The Paralympic Games returned to their spiritual birthplace for the London Games in 2012, with over 4000 athletes taking part.

Hotchkiss Engineering Group were able to make their own small contribution to the huge success of Team GB in the sports arena, helping the Ireland team who were competing in the 3 wheel cycling event near their Kent workshops.

When it was found that the 45mm bore of a small handle bar joint was too small for the bike shortly before the race was due to take

place, our engineers were quick to help out, enlarging the bore on our new CMZ CNC lathe.

Group Director Tom Sisley says "Whether a job is large or small, complex or simple, Hotchkiss engineers can **handle** it!"

More information on the CMZ CNC Lathe used for this job can be found on our website: www.hotchkissengineeringgroup.co.uk
