

THE HOTCHKISS GROUP OF ENGINEERING COMPANIES

CODED WELDERS BESPOKE PROJECT – ASME

Thorpe Park is world-renowned for exciting rides, with passenger safety being uppermost on their agenda. A trained coded welder is the only way to ensure that the exacting safety regulations are met.

The Hotchkiss Engineering Group currently holds Coded Welder Approval to ASME IX.

Our trained coded welders were called upon to weld a flange onto a boom which was then attached via the flange onto the individual seat. The coded welding ensured that the project was completed with safety of paramount importance, especially reassuring for passengers on a ride which swings 20 metres into the air.

Similar stringent safety standards can only be met by a coded welder and trained operator for any important bespoke welding, for example within a power station. The Hotchkiss Engineering Group foresee many future opportunities to use the new coded welding service in the energy and utilities sector.

More information on our coded welder services can be found on our website:
