

## CNC Roll Grinding & Balancing

At John D. Hotchkiss Limited our roll grinder can accommodate rolls up to 60 metric tonnes.

As well as grinding parallel and cambered roll surface finishes, we also offer belt grinding and super finishing on materials such as Ceramic and Teflon.

We can accommodate even the largest cylindrical rolls used within the paper, cable and steel industries, giving a surface finish better than 1 micron and up to 1.60 metres in diameter and up to 10 metres long.

In all of our years of dynamic balancing we have built up experience with a wide range of industrial parts including rotors, centrifugal fans, axles, impellers, flywheels, propellers, rollers, to name a few. We are able to precisely dynamic balance virtually any rotating part.

**BALANCING A DRIVE SHAFT**
