

THE HOTCHKISS GROUP OF ENGINEERING COMPANIES

MILLING PLATES FOR REFURBISHMENT OF UNDERGROUND TUNNEL SEGMENTS – CNC FIVE AXIS MILLING MACHINE

Discairn Project Services Ltd's Managing Director Ian Bennison was very pleased to discover a locally-based engineering company capable of working with them on their latest £1.1million contract. Their part in the project to redevelop Tottenham Court Road Underground Station involved the refurbishment of tunnel segments, supplying 600 tonnes of plate fabrication.

The Hotchkiss Engineering Group's CNC Five Axis Milling Machine was used to produce positional faces in parallel on the 400 plates needed. Working to the customer's specific dimensions, our staff were able to combine years

of experience with the capabilities of modern equipment.

Discairn Managing Director Ian Bennison was delighted with the high level of service: "I searched to find a locally-based engineering company to work with us to fulfil our contract. J D Hotchkiss met our needs on time, at the right price. I won't hesitate to rely on their knowledge and services again, and would be happy to recommend them to others."

More information on the CNC Five Axis Milling Machine used for this job can be found on our website: www.hotchkissengineeringgroup.co.uk.
