

THE HOTCHKISS GROUP OF ENGINEERING COMPANIES

GRAHAM HART TOBACCO VESSEL

This 2 tonne stainless steel tobacco vessel lid had to be CNC CAD CAM machined on our large capacity 5 Axis CNC milling machine, the diameter of the flange being 1.7m.

The mating faces were fully turned on our large CNC lathe before the part was moved on to our CNC milling machine, utilising its 15 tonne capacity rotating table to drill and scallop various holes in the dome as per the customer's drawings.

More information on our large capacity CNC machining services can be found on our website:
